CIVICA

CostMaster

Delivering a clear **view of activity** and **cost variation**

An innovative costing solution that helps hospitals accurately present costing data in a meaningful way to clinicians and operational managers around the world.

Civica's CostMaster solution enables end-to-end cost reporting and management for your key decision-makers, from organisation level right down to an individual patient bill. By unifying activity and associated cost information, you can quickly identify clinical and cost variation against best practice, minimising risk. This enables you to deliver efficient services, ensuring better outcomes for both patients and your organisation.

Both top down and bottom up costing methodologies are supported giving the hospital total flexibility in how it accounts for its costs. CostMaster also provides full reconciliation to the hospital's general ledger.

CostMaster has helped inform key stakeholders of the value of costing and encouraged better, more efficient working and improved costs."

Philip Cave,
Director of Finance and Performance
East Kent Hospitals University NHS Foundation Trust

Why choose Civica CostMaster?

- **Granular patient level costing**
  Generate meaningful real-time analysis, insights and reports for individual patients.

- **Save time & costs**
  Reduce time and cost of data collection and analysis

- **Improve patient experience**
  Understand costs and allocate budgets for better patient outcomes

- **Assertive decisons**
  Reducing reporting time with AI capability helps your team understand the all costs and make better decisions when planning.
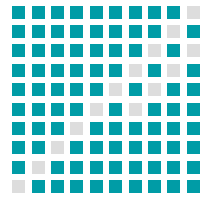

CIVICA

CostMaster Aurum

CostMaster Aurum has been designed specifically for thehealthcare market to provide useful, timely cost and income information leaving managers with time tomanage. Hospitals are able to view costs at patient,consultant and site level in addition to OPCS/ICD10/ Specialty/Service/Point of Delivery level.

Itt performs patient level costing, taking all the activity within the healthcare setting and applying the financial implications, from bandages to theatre activity, generating a large, accurate dataset which can help find operational efficiencies and deliver savings. The size of this dataset however is a challenge. A single costing model can hold over 3 billion artefacts, yet the current approach to uncovering insights is to refine data with visualization tools and through manual review with an analyst.

Civica by numbers

Supporting essential services for more than **90 million people**

Producing **17 years** unbroken growth

- **4,700** Employees

- **98%** Customer retention

- **10** Countries

Features

- Automation of manual processes

- Patient matching handles all data and matches at the patient level

- Transparency open Microsoft SQL system, easy to use and manage

- Multiple cost models effectively managed within the CostMaster data warehouse

- Reporting options in-built reports and cubes as part of CostMaster

- Link in any BI output can link to any reporting tool QV, Tableau or Power BI

- Clinical use and variation reports easy to set up and monitor

- Managed service options to outsource SLR/PLICs production

- NO SQL skills required to manage CostMaster
